Flashtail Whistler – Fire Tiger

Originally this pattern was designed by Dan Blanton for saltwater use, but over the years it has been adopted by freshwater anglers for its versatility and effectiveness. This pattern is one of the must-have flies that will work in various colors for various species – if it is a predator, it will eat the Whistler.

Beyond pike and musky, I have found various sizes and colors to work well for trout, bass and salmon. The color choices are endless and this particular scheme is a favorite of salmon when they first are in the river. Anglers using lures for these fresh salmon have an affinity for Storm Thunderstick lures in Fire Tiger and it’s effectiveness has led me to tying this fly pattern in a similar color scheme. Make sure your fly box is filled with yellow/red, white/red, chart./olive, olive/yellow, orange/olive, and gray/white to be equipped and ready for various species in various situations.

Like the name suggests, there is a liberal amount of flash tied into the tail that not only provides flash, but also action.

The bead-chain eyes “whistle” as you cast the fly through the air. The physical weight of this pattern
makes it easy to cast and it retains little water helping to keep it light weight. The thin profile of this pattern causes it to sink slowly which is ideal for shallow water and floating lines while it allows for decent penetration of the water column when fished with sink-tips. Further, you can mitigate the bead chain eyes with other, heavy sinking eyes if you are looking to get the fly even deeper.

**Recipe:[divider style=”shadow”]**

**Hook:** Gamakatsu B10S, TMC 811S, 600SP; **Size:** 3/0 – 6  
**Thread:** Fly Master + or Uni 3/0 – Chartreuse  
**Tail:** Flashabou – A mix of Kelly Green, Green Glow-in-the-dark, and Chartreuse  
**Body:** Bucktail – Flo. Orange, Kelly Green and Black  
**Wing:** Chartreuse Grizzly Saddle hackle. Krystal Flash – Chartreuse  
**Throat:** Red Dubbing (I like Pseudo Seal, Angora Goat or Simi-Seal) or Red Chenille  
**Collar:** Highlander Green Schlappen  
**Eyes:** X-Large Bead Chain – Stainless Steel

**Tying Instructions:[divider style=”shadow”]**

**Step 1.** Wrap a thread base to above the hook point and take thread back to behind the hook and tie in bead-chain eyes on the underside of the hook.

[divider style=”shadow”]
Step 2. Tie in Flashabou tail – 3 times hook shank length. [The pictured fly’s tail is a little shorter which was done for photographing reasons]

[divider style=”shadow”]

Step 3. Invert hook and tie in orange bucktail so tips extend one hook shank length behind the bend of the hook. Trim excess and wrap in between butts to get a good purchase and secure.

[divider style=”shadow”]
**Step 4.** Return hook to normal position. Tie in top bucktail to same length as bottom section, but slightly denser to ensure the fly swims right side up. Majority of the top color is Kelly Green with some black on top to match the color scheme. Trim excess and secure. Tie in a few strands of Krystal Flash on each side.

**Step 5.** Prepare saddle hackle by trimming some of the fibers, but leaving the butts to allow for a secure mount. Pinch the stem of the feather flat with smooth faced hemostats or pliers to keep the feather from rotating when mounted. Mount on each side of the fly with natural feather curves bending in. The tips should be the same length as the bucktail. Tie in additional Krystal Flash over the hackle wings extending aprox. the same length as the hackle.
Step 6. Loosely dub over the thread wraps with some red dubbing. This not only helps to protect the materials, but also gives an appearance of gills. The original pattern was tied with red chenille, but I prefer the low profile of dubbing which also makes for a textured surface to tie in the schlappen feathers.

Step 7. Tie in 2 or 3 large Schlappen feathers by their tips between the dubbing and eyes. Be sure to tie schlappen in where fibers are long enough (aprox. just larger than a hook gape).
Step 8. Wind all the feathers together forward to just behind the eyes and tie down. Whip finish and tie off.

Optional: When fishing, try using a Wiggle Fin Action Disc on the line in front of the fly. This plastic dish creates a unique wobble and imparts a lot of action when pulled slowly. The resulting wiggle/motion of the fly and the flashabou tail is seductive. Click here for the Wiggle Fin website.
